

GRAPHENE 360

AMPLIFY YOUR ENERGY

Graphene 360 forms the structural base of the racquet, strategically positioned in the shaft and extending into the racquet head. It strengthens the frame, providing greater stability and optimized energy transfer from racquet to ball maximizing the power of your game.

MAGHESIDH 3B CHISSS

DESIGNED LIKE NO OTHER
PLAYS LIKE NO OTHER

HEAD

POWER UNDER CONTROL

MXG FUSES MAGNESIUM AND GRAPHENE TOUCH TO GIVE YOU A BALANCE OF POWER AND CONTROL LIKE NO OTHER RACQUET.

THE ULTIMATE COMBINATION OF POWER AND CONTROL IN ONE RACQUET - THIS IS MXG.

UNTIL NOW, TENNIS RACQUETS OFFERED EITHER POWER OR CONTROL. BUT WE WERE DETERMINED TO COMBINE BOTH.

THANKS TO OUR RESEARCH AND DEVELOP-MENT, YOU NO LONGER HAVE TO CHOOSE. OUR REVOLUTIONARY TECHNOLOGY "MXG" MERGES TWO MATERIALS, GRAPHENE AND MAGNESIUM, FOR THE ULTIMATE BALANCE OF POWER AND CONTROL ... LIKE NO OTHER.

THE INJECTION-MOLDED MAGNESIUM BRIDGE, AN ENGINEERING PROCESS WIDELY USED IN THE AUTOMOTIVE INDUSTRY, IS PRECISION FORMED AND PROVIDES ULTIMATE STABILITY AT VERY LOW WEIGHT.

THE SECRET TO "POWER UNDER CONTROL" LIES IN THE INNOVATIVE MAGNESIUM BRIDGE, SPECIFICALLY DESIGNED FOR LONGER FREE MOVING MAIN STRINGS WHICH PROVIDE A MUCH LARGER SWEET SPOT AND MORE POWER.

AT THE SAME TIME, THE SOLID MAGNESIUM BRIDGE KEEPS THE HOOP FROM DEFORMING AND OFFERS YOU TOTAL CONTROL ON EVERY SHOT.

MXG GIVES YOU POWER UNDER CONTROL LIKE NO OTHER.

REVOLUTIONARY DESIGN AND ENGINEERING The MXG's injection molded Magnesium Bridge is precision formed and provides ultimate stability at very low weight.

POWER

Longer free moving main strings provide a much larger sweet spot and more power.

CONTROL

The solid Magnesium Bridge keeps the hoop from deforming for total control on every shot.

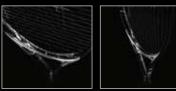

Graphene Touch Technology provides additional power and reduces shock for a solid, dampened feel.

MXG 1

Introducing the next generation of racquet technology: The MXG 1 and its groundbreaking MXG technology provide the ultimate balance of power and control for tour players like no other.

4-BALL CAN ART NO 571354, 6 dz, 18 cans/carton

HEAD PRO

The perfect ball for the tournament or serious club player, the HEAD PRO offers good spin and long durability.

3-BALL CAN

ART NO 571603, 6 dz, 24 cans/carton

4-BALL CAN

ART NO 571604, 6 dz, 18 cans/carton

TECHNOLOGIES

ENCORE[™] TECHNOLOGY 33% longer lasting* with Encore[™] technology. Encore[™] technology is based on a blend of natural and man-made polymers in a core that limits ball softening. This allows the ball to stay fresh and play "like new" much longer. Players will feel like they are playing with new tennis balls, even if they have been open for weeks.

* Encore™ technology: comparison of ball softening between the new HEAD ATP and original Pro Penn

SMARTOPTIK[™] TECHNOLOGY 19% greater visibility** with SmartOptik™ felt. It doesn't get much brighter than this: with SmartOptik™ felt, HEAD balls are 19% brighter than standard tennis balls. This higher visibility means players can see the ball earlier, have a better reaction time, and hit more precisely.

** SmartOptik™ felt: based on Vectorscope Digital Test Data - Feb. 2016

CHAMPIONSHIP

HEAD CHAMPIONSHIP

The HEAD CHAMPIONSHIP Ball is a durable, comfortable and easy-to-play ball. Perfect for a quick hit or game on every surface.

3-BALL CAN ART NO 575203, 6 dz, 24 cans/carton

HEAD 4D-SHELL

A very lightweight, breathable and comfortable 4D foam protected by a stable PU molded abrasion resistant shell. The combination of materials provides great comfort, breathability and stability.

HEAD Hybrasion+

A special rubber compound developed for tennis shoes. Guarantees the best traction for all court surfaces while still providing excellent durability for players who slide a lot.

HEAD Cooling System Perforations in the outsole, midsole and

sockliner ensure great ventilation in the bottom of the shoe. Also includes a breathable upper mesh material that provides optimal cooling.

HEAD Drift Defense In order to have a complete durable shoe, the upper of a tennis shoe needs to be durable as well, especially around the toe and medial forefoot area. HEAD uses an abrasion resistant rubber or a TPU layer in the Drift Defence technology to protect this area during aggressive toe drags.

HEAD Heelstab 180° TPU Brace that wraps around the heel for best fit and support.

HEAD Lockdown Strap Midfoot straps integrated into the lacing system keep your foot in place.

HEAD TRI-NRG

HEAD's complete support technology. First, NRG Neutralizes impact in the heel heal area, then it is **R**igid in the midfoot area for excellent torsional support, finally it **G**enerates energy as you move forward for additional acceleration. Using different materials with different properties and densities in each area of the shoe are key elements in this HEAD footwear technology.

HEAD Lateral Control

HEAD includes additional lateral stability on all our top performance shoes to help avoid rolling over during extreme slides.

HEAD Energy Frame

Inspired by our ski boots, the TPU wings guarantee the best stability when moving sideways. These stability elements have been specifically designed and developed for sports where lateral support is extremely important. This technology is a key element on all our stability products.

HEAD Hybrasion Non-Marking rubber compound that provides good grip and offers great durability on all surfaces.

SuperFabric[®] Extremely abrasion resistant and at the same time really flexible upper material.

STRINGS PORTFOLIO

MONOFILAMENT

HYBRID

STRINGS BASICS

MONOFILAMENT

Monofilament strings have a simple construction, as they are extruded as a single filament that is stretched until the desired diameter or dimension is obtained. They are highly engineered products, due to the special Polyester material and the additives which

are combined in complex production processes enhancing specific properties.

The elasticity of these strings provides excellent control and spin, and the combination of structure and material guarantees long lasting performance for high level players. The cross section can be engineered in a variety of ways: shaped to increase bite on the ball and spin potential, and coated to maximize wear resistance and improve string movement.

HYBRID

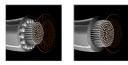

Hybrids are made by a combination of different strings in the mains and in the crosses of the racquet. The difference between mains and crosses lies in material, dimension, construction or shape.

In this combination the main strings primarily determine the spin potential, the control, and the overall feel and durability of the string bed. The cross strings are responsible for the comfort level, the power, and the outgoing angle that affects the trajectory of the ball.

The hybrid string setup allows players to combine the benefits of each individual string, based on its placement in the mains and crosses.

MULTIFILAMENT

Multifilament strings are complex. They are a twisted construction with hundreds or even thousands of synthetic microfilaments. These micro-filaments can be

different dimensions, shapes or materials. HEAD uses traditional round filaments and also specially engineered ribbons. The microfilaments are assembled within a synthetic resin matrix to create a softer impact feeling or more lively touch. The strings are then coated with a thin layer of thermoplastic material, with special additives that increase wear resistance and ensure perfect realignment after every shot. Multifilament strings are very arm friendly, comfortable and powerful, providing a high level of performance.

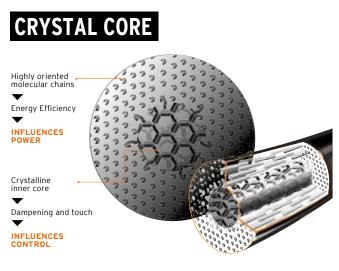

This type of string features a solid core monofilament nylon construction. It offers variable sizes, different dimensions, or can be co-extruded with other thermo-plastic materials. The core is encased by one or more wraps of microfilaments with varying

diameters or materials, and the construction is coated with one or more layers of thermo-plastic materials. Special additives are included to reduce the friction of the surface and to increase the durability.

These strings provide a crisper feel compared to multifilament strings and a more balanced combination of power and control. These strings offer a great all–around playability for a wide range of players.

The ratio control / power is defined by the Crystal Core diameter for Hawk and Hawk Touch.

RIP TECH

TOUR

HAWK ROUGH

The Hawk Rough Tour String is the perfect choice for the high-level versatile player who needs extra bite on the ball and ultimate touch and control.

HAWK TOUCH

This highly durable HAWK TOUCH Tour string is designed for high-level players who are looking for strings that provide ultimate touch and accurate feedback for their versatile game.
